DEPARTMENT OF AGRICULTURE

This issue of the Maryland Agricultural Statistics is the latest in a long record of ever productive enterprises. The formal tables of crop and livestock production it contains are but a mute record of the hard work and dedication of farmers and agri-business in this State.

These figures are Maryland's proud contribution to the muscle of America: its bountiful agriculture which keeps us the best fed people on earth at very modest consumer cost. They also reflect our Nation's ability to produce for sale abroad, earning for agriculture the honor of leading when it comes to positive contributions toward our balance of payments.

Those who read these statistics now, and in the future, should ponder for a moment the work, risk and skill which went into this production. It is heartening to see such bounty produced as a fruit of the free enterprise system. All of us should be thankful because we share in it three times a day, 365 days a year.

The figures, like the information they detail, are supplied basically by farmers whose willingness to participate in many surveys is greatly appreciated.

# FOREWORD

This issue of "Maryland Agricultural Statistics" updates the major series of agricultural statistics developed by the Maryland Crop Reporting Service. These series include data on crop production, livestock numbers and production, prices, income and many other facets of agriculture. The figures in this publication reflect revisions resulting from bench mark data made available by the 1978 Census of Agriculture. Estimates from 1975 to 1979 were reviewed. Changes in data included in this bulletin supercede data in earlie annual summaries.

A special thank-you is extended to the many Maryland farmers and agribusiness people who voluntarily provided the raw data essential to develop these estimates. Without their cooperation, this information would not be available. These estimates provide the groundwork for successful planning and decision making in all phases of agriculture and related industries.

Maryland Agricultual statistics is published through a cooperative agreement between the Maryland Department of Agriculture and the Statistical Reporting Service of the U.S.D.A.

Special recognition goes to the office staff for preparing the tables presented and particularly to Margaret Coyne for typing the tables and text for printing.

Sincerely,

M. Bruce West

State Statistician

# AGRICULTURE IN MARYLAND

## AGRICULTURE IN REVIEW

Drought stricken crops and record prices highlighted the 1980 season. Corn yields equaled the lows of 1977 and 1971. Soybean yields were cut to their lowest mark in ten years and tobacco averages were at their low since 1975. However, value of Maryland's major crops increased 4 percent from the previous year, the highest level on record. End of year inventories of cattle were up 8 percent from the previous year while hog numbers were down 6 percent. The number of laying type chickens were up 19 percent but broiler production fell 1 percent from a year ago.

## CROP VALUES AT RECORD LEVEL

Most crop prices exceeded previous year season average prices in 1980 and either set new, or were near record levels. The total value of Maryland's major crops equaled $371 million. Farmers received record high prices for corn, wheat, oats, soybeans, barley, rye, tobacco, potatoes, sweet potatoes, fresh market cabbage and watermelons and processing lima beans, cucumbers for pickles, green peas, and tomatoes. However, due to lower yields, the only crops to set total value of production records were corn, grain, wheat, tobacco, watermelons and cucumbers for pickles. Cash receipts from farm marketings of crops during 1980 are estimated $267.2 million, down 15 percent from the $313.2 million total for 1979.

## LIVESTOCK MARKETINGS RECORD HIGH

Maryland livestock producers received a record total of $606.9 million for farm marketings of livestock, poultry, and related products. That amount exceeded the 1979 previous high by 8 percent. Livestock prices were lower in 1980 compared with 1979 for cattle, hogs, and sheep, but marketings for hogs and sheep increased markedly. Hog marketings, at 72.8 million pounds increased 26 percent while sheep climbed 44 percent to 1.3 million pounds. Cattle marketings were virtually unchanged at 81.4 million pounds. The annual broiler price approached the record high set in 1947 as it reached an average of 29 cents per pound in 1980. The price fluctuated significantly during the year, ranging from a low of 23 cents in April to 34.5 cents in August. Even with broiler production and other chicken sales down gross income from poultry sales totaled $289 million, up 10 percent from 1979. Milk prices exceeded their previous record in 1979 by $1.00, settling at an average of $13.60 per cwt. for the year.

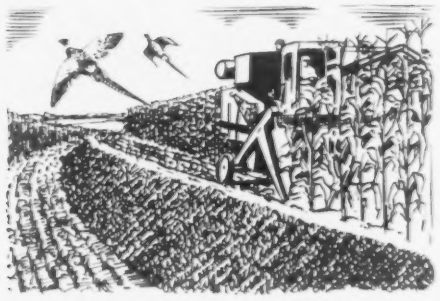
# CROP STATISTICS



Dry weather through most of the summer and fall limited crop production in most of Maryland. Yields were below 1979 for all crops except small grains, potatoes and apples. Acreage harvested in 1980 totaled 1.63 million acres compared with 1.61 million in 1979. There were no set-aside acres recorded for the 1980 crop season, but in 1979, slightly over 18,000 acres were set-aside for compliance with the farm program.

Wet weather in the fall of 1979 hindered planting of 1980 winter grains. Planting progress was hampered until mid-October and seeding was not completed until late November. Soil moisture was maintained at adequate to surplus through winter into spring, creating good growing conditions for small grains. However weeds and mildew were a minor problem. Vegetable plantings started on time and moved along well as did corn and soybean plantings. Optimal weather in early June allowed farmers to complete corn seeding on schedule and soybean planting was near the norm. Conditions were also excellent through June for the fruit crops. Set was heavy and sizing was very good. The dry weather in June and July accelerated small grains ripening. Harvest progressed rapidly, ending ahead of normal. The dry, hot weather began to take its toll in July as development of row crops and hays slowed. Short season and double-cropped soybeans exhibited the most severe damage. Corn pollination was poor and maturation was accelerated, leading to an early harvest. Insect and disease infestations were generally minimal as a result of the drought conditions. Corn suffered very little insect damage but spider mites, earworms, and mexican bean beetles caused some problems in soybean fields.

## CORN

Maryland farmers harvested a record 640,000 acres in 1980 but grain production dropped to 46.1 million bushels, 22 percent below the previous year. Sharply reduced yields, averaging 72 bushels per acre, were the cause. All corn planted totaled 750,000 acres, 8 percent above 1979, also setting a new record.

## SOYBEANS

Soybean yields averaged 24 bushels per acre, dropping to their lowest mark in ten years, and production fell to 9.4 million bushels, 23 percent below 1979. Harvested acreage totaled 390,000 acres, 15,000 acres less than the previous year.

## TOBACCO

Yields for tobacco growers averaged the lowest since 1975 at 1,075 pounds per acre. However, production of 22.6 million pounds was above 1979 because 1,500 more acres were harvested in 1980.

## SMALL GRAINS

Wheat harvested, at 97,000 acres, was up 8 percent from 1979. Combined with a 1 bushel better average yield of 38 bushels per acre production increased 11 percent to 3.7 million bushels. A record high oat yield, at 59 bushels per acre, combined with 2,000 more acres harvested resulted in a production of 1.1 million bushels, 20 percent above the previous year. Barley yields were 3 bushels better, at 52, but this increase was more than offset by the smallest harvested acreage on record at 70,000 acres. Production totaled 3.6 million bushels.

## VEGETABLES

Combined vegetable production totaled 159,000 tons in 1980 compared with 190,000 in 1979. Harvested acreage was down sharply totaling 40,500 acres, 6,900 acres below the year before.

## FRUIT

Commercial apple production increased slightly from 1979 to 87 million pounds. Peaches, on the other hand, were down at 19 million pounds.

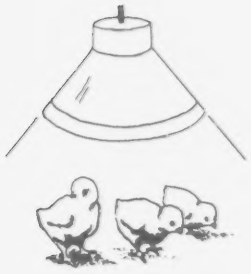
1/ Net value of sales for Foliage Plants. 2/ Data prior to 1976 not available. 3/ Does not include "open acreage" of vegetable transplants grown outdoors for use in commercial vegetable production.

# POULTRY STATISTICS



Maryland's commercial hatcheries produced over 303 million broiler type chicks during 1980, 3 percent more than 1979's production. Two hundred and fifty million chicks were placed in growing houses during the year, ranking Maryland sixth in the nation in 1980. This production fell 2 percent lower than 1979's record output.

Liveweight for 1980 totaled over 995 million pounds compared with nearly 1,004 million in 1979. The average price per pound rose to 29 cents from 26 cents a year earlier. The increased price more than offset the decline in production. The gross income of nearly 289 million dollars increased 11 percent from 1979.

Maryland's laying flocks produced 381 million eggs during the year ended November 30, 1980. This output increased 7 percent more than the previous year and 11 percent more than the 1978 production. The number of layers on hand during 1980 averaged 1.7 million birds, 12 percent above the year before.

The number of chickens on farms (excluding broilers) on December 1, 1980 totaled 2.56 million birds, 19 percent above the previous year and 28 percent above December 1, 1978. The estimated value of the inventory reached nearly 4.9 million dollars or $1.90 per bird. The inventory was composed of 944,000 hens, 1,100,000 pullets of laying age, 451,000 pullets not yet of laying age and 60,000 other chickens.

Eggs sold during the year ended November 30, 1980 received an average of 64.0 cents per dozen compared with 72.9 cents per dozen in the previous year. Gross income from eggs, at $20.3 million, declined 6 percent from 1979.

Gross value from production of all poultry in 1980 totaled approximately $290 million, according to preliminary estimates, up 10 percent from 1979 total value. Poultry and eggs accounted for about one third of the total cash receipts from farm marketings for 1979.

COMMERCIAL BROILERS: PRODUCTION AND VALUE, MARYLAND, 1975-80 1/

| YEAR | NUMBER PRODUCED | AVERAGE LIVEWEIGHT | POUNDS PRODUCED | AVERAGE PRICE PER POUND 2/ | VALUE 3/ |

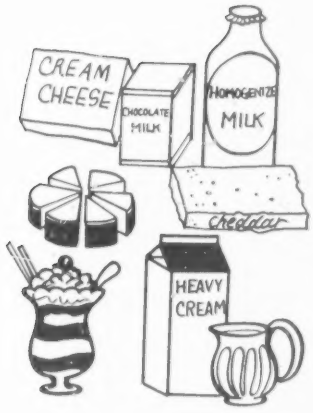
1/ Includes eggs set for chicks to be raised as broilers and to be raised as hatchery flock replacements.
2/ Include only chicks to be raised as broilers. Adjusted for chicks shipped into or out of State.
3/ November and December of previous year.

# DAIRY
## STATISTICS



Dairy herds in Maryland produced 1.520 billion pounds of milk in 1980, the same as 1979. The annual production per cow for 1980 averaged 12,358 pounds, up 295 pounds from the previous year. Milk cow numbers for 1980 averaged 123,000, a decline of 3,000 cows from the 1979 average. The number of milk cows on farms declined from January through July but then increased through September to a level maintained for the remainder of the year. Farmers marketed nearly 99 percent of the 1980 milk production and kept the rest for use on their farms.

Gross income from dairying in Maryland during 1980 totaled $206.3 million, 8 percent more than in 1979. The average price for all milk marketed was $13.65 per hundredweight, up $1.00 from 1979 and the seventeenth consecutive year that the annual milk price exceeded the previous year's average. Monthly milk prices fell steadily for the first half of the year but increased in the second half to reach a peak of $14.90 a hundredweight in December.

Prices received in 1980 for milk cows used as herd replacements were above a year earlier. Monthly prices averaged $1,260 for the year, $150 more per head than in 1979.

Producers generally paid more for feed than a year earlier except in July when prices of most mixed feeds were near or below the previous year.

Frederick, Carroll and Washington counties were the leading milk producers, accounting for 58 percent of the state's production. Frederick county led with 28 percent of the production.

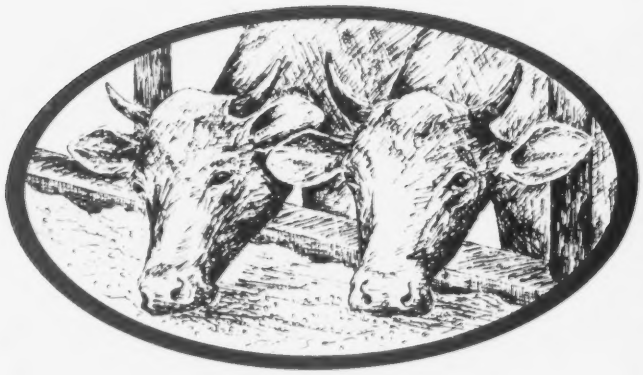
# LIVESTOCK STATISTICS



Maryland cattle inventory on January 1, 1980 totaled 380,000 head. During the year, numbers increased to 410,000, the inventory on January 1, 1981, up 8 percent from the previous year. Total value for cattle and calves on January 1, 1981 amounted to a record high of $295 million. Cash receipts from sale of cattle and calves during 1980 totaled $49.6 million, down 2 percent from the $50.7 million in 1979.

Milk cows, accounting for 30 percent of all cattle in Maryland, decreased 1 percent from a year before, to 124,000 head. Beef cows numbers increased 33 percent, representing 23 percent of the total inventory. Maryland's 1980 calf crop at 190,000, was up 2 percent from the previous year and the largest calf crop since 1975. Farm operations with cattle in 1980, (numbered 7,800) down 100 operations from 1979.

The inventory of all hogs and pigs on December 1, 1980 fell 6 percent from a year earlier. Breeding hogs at 29,000 head, were down 33 percent, compared with 43,000 head in 1979. Farmers had 191,000 market hogs, 1,000 fewer than the previous year. The pig crop during December 1979 - May 1980, totaled 183,000, up 23 percent from the same period a year earlier, while the fall pig crop, June - November 1980, decreased 6 percent from fall 1979. Total value for hogs jumped 41 percent in 1980 to $16.7 million and cash receipts at $29.4 million climbed 10 percent.

Sheep and lambs on Maryland operations totaled 18,000 head on January 1. This total was 10 percent less than the January 1, 1980 inventory. The inventory value of $1.20 million was about the same as the previous year. Cash receipts for sheep and lamb sales of $524,000 in 1980 raised 12 percent above 1979.

2/ Excludes custom slaughter for use on farms where produced and inter-farm sales within the State.
3/ Receipts from marketings and sale of farm slaughter.

# PRICES, INCOME AND LABOR

## CASH RECEIPTS DOWN

Cash receipts from farm marketings in 1980 fell below year earlier levels for the first time since 1977. The 1980 total dipped $2.5 million below 1979 to $877.1 million. However receipts from livestock and livestock products jumped 8 percent to a new record $609.9 million and accounted for 70 percent of all receipts. Cash receipts for crops more than offset the gain from livestock. The crops total decreased 15 percent to $267.2 million. Crops contributed only 30 percent of all receipts in 1980 compared with 36 percent in 1979. The increase in livestock cash receipts was primarily due to the combination of higher milk and broiler prices and increased numbers of livestock marketed. However the decline in crops receipts, was largely a result of production shortfalls. Crop prices were generally up in 1980.

## FARM PRICES STRONGER AT YEAR'S END

Farm product prices ended 1980 at a much higher level than at the start of the year, pulling the All Commodities index of prices received to its highest annual average ever, 225 percent of its 1967 base. Prices entered 1980 on an upward trend with an index of 218 in January. However livestock and poultry prices dropped sharply early in the year dropping the index to the years low of 201 in April. A gradual recovery started after April and the index reached its peak of 246 in October.

## GRAINS LEAD CROPS

Farmers received record high prices for corn, barley, and oats in 1980. These crops led the All Crops index to its record high average of 238 for 1980, up 17 points (8 percent), from 1979. The Grains and Hay index increased 13 percent during the year and ranged from a low of 210 in April to a high of 274 in November. Farmers also received a record season average price of $8.10 per bushel for 1980 crop soybeans. But prices received early in the year from the 1979 crop brought the calender year average 1 point lower.

## LIVESTOCK PRICES UP

The Livestock and Livestock Products index finished the year at its highest level ever for three of the final four months; thus having enough strength to pull the annual average to a record 219 percent of 1967, up 12 points (6 percent) from 1979. Poultry and Dairy Products held the index up with 8 percent and 7 percent increased, respectively. Both broiler and milk prices reached record levels in 1980. Meat animals moderated the increase as beef cattle, calves, and hog prices all averaged below 1979. The Meat Animal Index started the year favorably but dipped from March through July to bring the annual average to 253, down 5 percent.

## 1979 FARM INCOME LOWER

Maryland net income per farm in 1979, fell 7 percent from 1978 to $9,595. Cash receipts in 1979 were up 14 percent, leading the way for the increase in total farm income. However, production expenses increased 16 percent to more than offset the income gains. Gross income per farm averaged $59,281, up 14 percent from 1978.

Farm production expenses in 1979 totaled $847.2 million. Feed costs were the largest single expense amounting to 21 percent of the total. Interest on farm mortgage dept accounted for the largest percentage increase, up 25 percent from the previous year. Taxes on farm property, on the other hand, declined for the third consecutive year.

## FARM LABOR

Workers on Maryland farms decreased in 1980. The number of workers during the year averaged 31,000 compared with 33,000 for the previous year. The seasonal trend was altered somewhat during the year. The peak was still reached in July but the normal annual low point in January was also equaled in October. Hired workers accounted for nearly 40 percent of the total work force.

Wage rates in 1980 continued to climb. All hired workers received an average of $3.48 per hour compared with $3.11 in 1979. The highest average wage paid was $3.70 per hour, in October.
